

# Ukrainian energy storage product exports

## Overview

---

Let's talk about Ukrainian energy storage battery exports – the dark horse of Europe's renewable energy transition. In 2023 alone, Ukraine shipped over \$420 million worth of lithium-ion batteries globally, marking a 67% year-on-year increase. With the expected increase in renewables and a more fluctuating electricity generation profile, this largely untapped. Since Russia's invasion in February 2022, Ukraine has accelerated integration of its energy trade and infrastructure with Europe, moving away from its historical ties with Russia. This integration includes trade and infrastructure related to oil, natural gas, coal, electricity, and other energy. A sovereign state in Eastern Europe, Ukraine exported US\$40. That dollar amount results from a -17. 2 billion five years earlier in 2020. 2 billion. In this context, Battery Energy Storage Systems (BESS) play an essential role in strengthening grid stability, ensuring a steady electricity supply and facilitating the efficient integration of RES into Ukraine's energy system. What was once a niche sector is now a critical lifeline and a strategic investment frontier, emerging directly from the heart of a profound national crisis. Not bad for a market that didn't even crack the top 20.
