

# What does a rooftop photovoltaic panel look like

## Overview

---

They have a distinctive blue, speckled appearance and represent a good value proposition for homeowners with ample roof space. Thin-film panels use layers of photovoltaic materials like cadmium telluride or amorphous silicon deposited on glass, metal, or plastic substrates. The design of your solar energy rooftop system contributes to your house's overall aesthetic and has implications for function, maintenance, and ease. Solar Rooftop Design: What Does That Mean?

The process of designing and planning the positioning of solar panels on a rooftop is called solar. A rooftop solar photovoltaic (PV) system uses solar panels mounted on the roof of a building to convert sunlight into electricity. Rooftop solar systems rely on the photovoltaic effect, where cells generate electricity in response to sunlight.
