

What is the height limit of rooftop photovoltaic brackets

Overview

Solar panels should be mounted at a height of 3.25" from the roof's surface to ensure optimal performance. This measurement takes into account the seam of the SSMR, typically 1.5" to 3" in height, the mounting hardware, adding approximately $\frac{3}{4}$ " and the module frame. Roofs require different mounting solutions. Whether it's a flat commercial rooftop or a pitched residential roof, the material--be it metal, tile, or asphalt--will dictate the appropriate mounting system. On a flat roof we would use a ballasted system. This means the roof is not penetrated (which would let). The installation height of a photovoltaic bracket is a critical factor that significantly impacts the performance, efficiency, and overall viability of a solar power system. Learn why 18-36 inches has become the industry's golden range for rooftop PV installations.
