## Overview

---

People used wind energy to propel boats along the Nile River as early as 5,000 BC. By 200 BC, simple wind-powered water pumps were used in China, and windmills with woven-reed blades were grinding grain in Persia and the Middle East. But when did people first start to harness the power of the wind?

When was the first wind turbine created?

What did wind energy look like and how has it evolved?

Here we look at the. Discover the history of wind power, the development of its technology, and its effect on society. Wind power is one of the oldest forms of energy. As early as 4000 BC, ancient civilizations around the world were using it to propel boats, pump water, and run simple machines for grinding grain and. Onshore wind energy is one of the most widely used forms of renewable energy on the planet and consists of harnessing the power of the wind by means of wind turbines to generate electricity.

21st century

Wind power has been used as long as humans have put sails into the wind. Wind-powered machines used to grind grain and pump water -- the windmill and wind pump -- were developed in what is now Iran, Afghanistan, and Pakistan by the 9th century. Wind power was widely available and not confined to the banks of fast-flowing streams, or later, requiring sources of fuel. Wind-powered pumps drained the polders of the Netherlands
