

Which month will the price of photovoltaic panels be lower

Overview

Residential solar prices are falling lower than ever before, said marketplace operator EnergySage in its biannual solar and storage marketplace report. The median quoted price on its platform reached \$2.50 per watt in the second half of 2024, falling 6%. While we don't expect a dramatic drop in pricing, there are opportunities to lower costs and increase homeowners' savings. After the passage of the One Big Beautiful Bill (OBBB), demand for solar exceeded the supply. In early 2025, SolarReviews surveyed hundreds of solar companies, finding the average cost for a first-year lease was about \$22 per kilowatt (kW) per month. Why trust EnergySage?

If you've been putting off solar because of sticker shock, this might change your mind: Most homeowners save \$37,000 to \$154,000 over 25 years. Simply looking at the rate of cost declines in recent years, one could expect solar photovoltaic (PV) modules to get cheaper in a few short years. Indeed, the price trend over the past two decades has been decreasing even despite some bumps on the road like 2018 tariffs on imported solar equipment. Solar panels can lower your electricity bill by 75% or more, but the upfront investment is significant. Most homeowners spend between \$12,600 and \$33,376 to install a complete residential solar system in 2026, with the national average at \$19,873 before incentives.
