

Why are photovoltaic panels all in English

Overview

Solar photovoltaic panels are primarily referred to as photovoltaic modules, but they can also be known as solar panels, PV panels, or solar cells. These panels convert sunlight directly into electricity through the photovoltaic effect. PV cells are made of materials that produce excited electrons when exposed to light. DC coupling has multiple advantages, such as less conversions, higher efficiencies and supporting PV oversizing. Below, you can find resources and information on the solar panel, a component of a photovoltaic system that is made out of a series of photovoltaic cells arranged to generate electricity using sunlight.
